

What we are looking for: does a better generator (lower FID) actually give higher accuracy (RQ1), and do the two CNNs react differently from the two Transformers (RQ2)? A drop in accuracy is a valid result and gets reported.

Bold border = part of Stage 1: Tier A (CIFAR-100) · ResNet-50 and ViT-B/16 · real-only, RandAugment and the two Stable Diffusion generators · ratio 1:1.
